- November 11 Petroleum & Co-Produced Fluid Extraction & Injection
Workshop**
Sponsored by Oklahoma Geological Survey University of Oklahoma
Mewbourne College of Earth & Energy
Sheraton Midwest City Hotel at the Reed Conference Center
Midwest City, Oklahoma

Oklahoma Geological Survey will present a one-day workshop on **Petroleum & Co-Produced Fluid Extraction & Injection**. The workshop will be held at the Reed Conference Center, 5750 Will Rogers Road, in Midwest City, Oklahoma

The one-day workshop is designed to provide the participants with the recent development of petroleum-rich carbonate reservoirs in the Mid-Continent has led to large-scale water-disposal practices that may be related to increased seismic activity. Understanding local and regional characteristics of these reservoirs that produce hydrocarbons and the formations that store injected water is critical for continued development of oil and gas resources.

This workshop will examine development trends of the Hunton and Mississippian plays that have significant oil and water extraction histories. Another emphasis will be on the formations comprising the Arbuckle Group that are the primary waste-water disposal zones in Oklahoma.

Scientific findings and operator case studies will supplement the workshop.

Nov. 10 & 12 Petroleum & Co-Produced Fluid Extraction & Injection Field Trip

Sponsored by Oklahoma Geological Survey University of Oklahoma

Mewbourne College of Earth & Energy

Sheraton Midwest City Hotel at the Reed Conference Center

Midwest City, Oklahoma

The field trip will examine outcrop and/or quarry exposures of geologic and structural characteristics that may be extrapolated to those in subsurface producing and disposal zones discussed in the workshop. These rock exposures exhibit porosity types, structural features, and fracture patterns that not only store hydrocarbons but also enable widespread and large-scale water disposal/migration into the Arbuckle Group.

Depending on operator permission, sites with on-going petroleum recovery and saltwater-disposal operations will be visited.
